Secure AI Now Omnibus October: National
Toplines

Sample	Online sample of 1,015 voters fielded from October 27 to November 03, 2026.
Margin of Error	±3.8%

1. Do you [support or oppose] political candidates who are in favor of safeguards on artificial intelligence (AI)?

Strongly support	43%
Somewhat support	38%
Somewhat oppose	11%
Strongly oppose	9%
Not sure	0%
Totals	101%
N	**1,015**

2. Which political party do you believe has a better plan to protect Americans from the risks of artificial intelligence (AI)?

The Democratic Party	32%
The Republican Party	29%
Neither party	34%
Both parties equally	6%
Totals	101%
N	**1,015**

Toplines

This survey is based on 1,015 interviews conducted by YouGov on the internet of registered voters. The sample was weighted according to gender, age, race/ethnicity, education, and census region based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote, 2022 general election turnout, and approximate 2024 Presidential vote based on available results, and party identification estimates based on Pew Research Center's National Public Opinion Reference Survey. Respondents were selected from YouGov to be representative of registered voters. The weights range from 0.07 to 6.01 with a mean of 1 and a standard deviation of 0.7.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetted sample is approximately 3.8%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + \text{CV}^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
